

# The role of explosion-proof battery energy storage cabinets

## Overview

---

Explosion-proof cabinets (EPCabs) contain and mitigate potential fires that stem from batteries. The cabinets are constructed from materials designed to resist high temperatures and to inhibit fire spread. What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

What happened at Gateway energy storage facility?

On May 15, 2024, Gateway Energy Storage Facility in San Diego, California, experienced a BESS fire with continued flare-ups for seven days following the fire. The facility held about 15,000 nickel manganese cobalt lithium-ion batteries.

Is 'let-it-burn' an effective fire suppression solution for battery energy storage systems?

2024]. Stat-X Aerosol Fire Suppression, Fireaway Inc., "'Let-It-Burn" is not an Effective Fire Suppression Solution for Battery Energy Storage Systems (WHITE PAPER)". Operational Assurance Team, "Significant Incide.

What if a vent panel is actuated in a deflagration or explosion?

come projectiles in the event of a deflagration or explosion. The angle of vent panel openings upon actuation also need to be considered, as different angles allow more or less oxygen to enter the enclosure while still retaining the flammable gas and heat within.

What are the risks of a battery fire?

BESS incidents can present unique challenges for host communities and first

responders: Fire Suppression: Lithium battery fires are extremely difficult to extinguish and may reignite hours or days later. Emissions: Battery fires can release harmful gases that pose health risks to nearby residents and first responders.

What is an arm-in/reach-in battery enclosure?

afety risks it poses to personnel entering the enclosure . Contrarily, arm-in/reach-in style enclosures have exterior doors that allow access to the battery modules and all equipment without entering the enclosure, thus relieving maintenance workers, technicians, or emergency response personal from having to enter the
