

The role of photovoltaic energy storage charging piles in Morocco

Overview

What is prout (photovoltaic output) in Morocco?

PVOUT (photovoltaic Output) is an indicator (kWh/kWp/year) that evaluates the potential solar energy production per unit of solar panel capacity installed over a long period. The average annual PVOUT in Morocco ranges from 1600 to 1900 kWh/kWp/yr depending on the location. Figure 11. Map of yearly photovoltaic output in Morocco (kWh/kWp/year).

Does concentrated solar power work in Morocco?

Bouhal el al. mapped Morocco in accordance with climate zoning in order to compare the energy generated by concentrated solar power (CSP) systems, particularly parabolic trough systems. The results confirmed the cost-effectiveness of this technology on a large scale (less expensive and more productive).

How does electricity storage work in Morocco?

It ensures the storage of electricity produced by renewable energies in order to adapt fluctuating supply to shifting demand. The first large-scale electricity storage project in Morocco is the 460 MW Afourer Pumped Storage Power Station (PETS), commissioned in 2004.

What is the first large-scale electricity storage project in Morocco?

The first large-scale electricity storage project in Morocco is the 460 MW Afourer Pumped Storage Power Station (PETS), commissioned in 2004. It consists of a hydraulic system composed of two 1.3 million-m3 water reservoirs connected by a pipeline with two hydroelectric production units between the basins.

How can Morocco overcome barriers to the development of solar energy?

RE sources only represented 19% of the overall electricity production. The barriers to the development of solar energy in Morocco can be overcome by

improving institutional and regulatory frameworks, including those related to low-voltage grid access, and completing the liberalization of the renewable electricity sector.

What is the future outlook of solar energy in Morocco?

Future Outlook of Solar Energy in Morocco Morocco is steadily working on increasing the share of renewables in its electricity mix and has set up very ambitious targets of reaching an RE share in the installed capacity of 52% by 2030, 70% by 2040, and 80% by 2050 (Figure 21 and Figure 22).
