

# Ukrainian solar photovoltaic panels

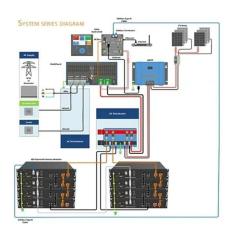

#### **Overview**

Solar on residential rooftops is popular for saving on electricity bills, which rose in the mid-2020s. Solar is also suitable for many . At the beginning of 2022 there was 1.2 GW of household solar, of which it is estimated 280 MW had been destroyed by the end of 2024. The IEA estimate that if all (excluding north-facing) roofs had panels 290 TWh could be generated.

PVTIME – Despite the ravages of war, Ukraine achieved significant growth in the PV market in 2024, with new installed capacity reaching 800-850MW in 2024, according to the Association of Solar Energy of Ukraine (ASEU). This growth was driven mainly by the reliance on self-consumption of PV systems by businesses and households to ensure the stability of electricity supply while meeting the challenges of grid security.
