

# **User-side energy storage Southern Power Grid**

### **Overview**

What is user-side energy storage?

The user-side energy storage, predominantly represented by electrochemical energy storage, has been widely utilized due to its capacity to facilitate renewable energy integration and participate in capacity markets as a responsive resource [4, 5].

What is a user-side small energy storage device?

With the new round of power system reform, energy storage, as a part of power system frequency regulation and peaking, is an indispensable part of the reform. Among them, user-side small energy storage devices have the advantages of small size, flexible use and convenient application, but present decentralized characteristics in space.

How can energy storage technology improve the power grid?

Energy storage technologies can effectively facilitate peak shaving and valley filling in the power grid, enhance its capacity for accommodating new energy generation, thereby ensuring its safe and stable operation 3, 4.

What is operational mechanism of user-side energy storage in cloud energy storage mode?

Operational mechanism of user-side energy storage in cloud energy storage mode: the operational mechanism of user-side energy storage in cloud energy storage mode determines how to optimize the management, storage, and release of energy storage resources to reduce user costs, enhance sustainability, and maintain grid stability.

What is a user-side energy storage optimization configuration model?

Subsequently, a user-side energy storage optimization configuration model is developed, integrating demand perception and uncertainties across multi-time scale, to ensure the provision of reliable energy storage configuration services

for different users. The primary contributions of this paper can be succinctly summarized as follows. 1.

What is a lifecycle user-side energy storage configuration model?

A comprehensive lifecycle user-side energy storage configuration model is established, taking into account diverse profit-making strategies, including peak shaving, valley filling arbitrage, DR, and demand management. This model accurately reflects the actual revenue of energy storage systems across different seasons.
