

Vatican power generation container customization

Overview

How will the Vatican's new energy system work?

According to the Vatican's press office, the installation will apply the most advanced solutions currently available, balancing clean energy generation with the preservation of agricultural use, the region's hydrogeological stability, and the protection of its cultural and archaeological heritage (ZENIT News / Rome, 08.01.2025).-.

Does the Vatican have solar power?

While not yet fully powered by renewables, the Vatican has steadily expanded its solar infrastructure since 2008: over 2,394 photovoltaic panels—many atop the Paul VI Audience Hall—already generate around 300 MWh of electricity annually.

What is the Vatican doing to reduce waste?

The project will also include agricultural activity, creating an “agrivoltaic” site that combines solar energy production with farming. In terms of waste, the Vatican is working to increase its recycling rate from 65% to 75%, surpassing the EU average of around 49% (Eurostat, 2022).

Does the Vatican have a low-energy lighting system?

The Vatican has introduced low-energy lighting systems; over 100,000 LED lights have replaced older fixtures, cutting energy consumption by up to 90% while protecting delicate frescoes from heat exposure.
