

What are Southeast Asia s energy storage projects

Overview

Is Southeast Asia a good place to invest in energy storage?

Image: ACEN. There has been an uptick in energy storage investment in Southeast Asia, a region still largely powered by coal and experiencing high growth in population and energy demand. Andy Colthorpe speaks with companies working to establish a framework of opportunities in the region.

What are the targets for Energy Services in Southeast Asia?

Targets include both detailed plans (e.g. Nationally Determined Contributions [NDCs] and long-term strategies) and statements by government officials (e.g. at COP26). The fuels and technologies used to meet expected growth in demand for energy services in Southeast Asia vary across our scenarios.

Is energy access improving in Southeast Asia?

Energy access has been improving in Southeast Asia in recent years: around 95% of households today have electricity and 70% have clean cooking solutions such as liquefied petroleum gas and improved cook stoves. However, these shares remain very low in Cambodia and Myanmar, and the recent surge in commodity prices threatens to set back progress.

How will Bess help Southeast Asia reshape the energy landscape?

By providing flexible, reliable, and scalable power, BESS enables Southeast Asia to overcome traditional infrastructure limitations and embrace a sustainable future. What role will BESS play in reshaping Southeast Asia's energy landscape?

Explore the insights here.

What are Southeast Asia s energy storage projects

South East Asia: The coming solar-storage revolution

South East Asia is set to undergo an energy revolution over the next 30 years and energy storage will be a key driver of change. The region's electricity grid generated 90 per ...
