

# What energy storage devices does Algeria use

# **Overview**

How is energy used in Algeria?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What is Algeria's solar power supply chain?

The Algerian solar power supply chain grew significantly in the last decade and now seeks to add IPP development, engineering and design capabilities, EPC services, inverters manufacturing, storage solution manufacturing, universal certification expertise, and operations and maintenance services.

Does Algeria have solar power?

Regarding solar power potential, Algeria is home to some of the world's highest solar irradiance levels, with the capacity to generate 1,850 to 2,100 kilowatts per hour and up to 3,500 hours per year in its desert regions.

Does Algeria have enough electricity?

Algeria has enough electricity supply to meet its domestic consumption, given its substantial natural gas reserves and the predominant use of natural gas in power generation. Algeria's electricity exports are limited by its electric transmission capacity.

How much natural gas did Algeria export in 2023?

According to the Energy Institute's 2024 Statistical Review of World Energy, Algeria exported about 1.9 Tcf of natural gas in 2023, most of which went to Europe. About 672 Bcf of natural gas was exported as LNG, and the remaining 1.2 Tcf was shipped via pipeline (Figure 13).21.

Who are US companies interested in doing business in Algeria?

U.S. companies interested in doing business in Algeria will primarily interact with SHAEMS, a company owned by Sonatrach and Sonelgaz, created to serve as a one-stop shop for companies pursuing larger IPP renewable energy projects. Upcoming tenders will include Sonelgaz, Sonatrach, AEC, or SHAEMS as the main party to the agreement.
