

# Which company will build the inverter for the US 5G communication base station

### **Overview**

### How 5G technology is transforming connectivity?

5G technology is revolutionizing connectivity, and the manufacturers of 5G equipment are leading this transformation. From modems and base stations to RAN, antenna arrays, and core networks, these companies are providing cutting-edge solutions. Leading vendors are offering innovative products to enhance network speed, coverage, and efficiency.

#### What are 5G solutions?

These solutions include 5G radio access products, which are used to build the base stations and antennas that form the backbone of 5G networks. It also offers 5G transport solutions, which are used to connect the base stations and antennas to the core network.

### What is a 5G radio access network?

The 5G Radio Access Network (RAN) is the interface between user devices and the 5G core network. It comprises base stations and small cells that manage radio communications, enabling ultra-fast data transfer and low-latency connections.

### Who makes 4G & 5G networks?

1. Airspan Networks Inc. Airspan Networks Inc. is a global provider of 4G and 5G wireless network solutions for mobile operators, cable and internet service providers, and private network operators. Its products and services are used by numerous mobile operators, cable and internet service providers, and private network operators worldwide.

### What is 5G ran equipment?

The company provides a wide range of products and services to mobile network operators, including 5G radio access network (RAN) equipment, core network solutions, and software for network management and automation. Its

5G RAN equipment is designed to help mobile network operators build out their 5G networks quickly and efficiently.

### What is a 5G NR Network?

As defined in 3GPP TS 38.300, the 5G NR network consists of NG RAN (Next Generation Radio Access Network) and 5GC (5G Core Network). As shown, NG-RAN is composed of gNBs (i.e., 5G Base stations) and ng-eNBs (i.e., LTE base stations). The figure above depicts the overall architecture of a 5G NR system and its components.
