

Wide voltage inverter with monitoring function

Overview

What is a 3 phase high voltage inverter?

This advanced three-phase high voltage inverter supports a wide battery voltage range (125V-800V) and employs cutting-edge DSP technology to maintain harmonic current/voltage below 3%, ensuring optimal grid stability. Accessible via WiFi and the web, it offers seamless remote monitoring and control.

Why do you need an inverter?

This enables users to quickly identify and resolve issues, ensuring the system can continue to operate efficiently. The protection and monitoring functions of the inverter ensure the safety and reliability of the energy system, providing users with a better experience. The selection and configuration of the inverter are crucial.

What is inverter protection mechanism?

This protection mechanism effectively safeguards the inverter and load devices from the hazards of short circuit faults. 3. Overvoltage Protection: The inverter not only monitors the stability of the input voltage but also recognizes excessively high input voltages.

How much power does an inverter provide?

Under normal circumstances, the inverter will provide a power supply of 2.5 kW based on the load requirements of the device. However, if you add another load that increases the load current beyond the rated capacity of the inverter, for example, 3.5 kW, the overload protection mechanism of the inverter will be triggered.

What happens if load current exceeds the capacity of the inverter?

If the load current exceeds the capacity of the inverter, it will disconnect the output connection and stop supplying power to the load device. This prevents

excessive current from damaging the inverter and the load device, ensuring the safe operation of the system.

How do inverters work?

4.Temperature Protection: The inverter is equipped with cooling fans that are controlled by an internal temperature sensor. When the internal temperature of the inverter exceeds 45°C, the fans start operating to dissipate heat and lower the working temperature of the inverter, preventing damage from overheating to the inverter and load devices.

Wide voltage inverter with monitoring function

PV Plant Monitoring

Inverter Monitoring Wattmon devices can monitor a wide range of inverters, both on Modbus TCP, Modbus RTU (RS-485) as well as RS-232 (on Wattmon MEGA and Wattmon ULTRA).
