

# Will photovoltaic panels provide complementary power if their power is insufficient

### **Overview**

How can solar panels and traditional electricity work together?

A household can marry solar power and traditional electricity for a more efficient, dynamic power system. Understanding how solar panels work with electricity can help you learn which solar power system could be right for you and how to use both types together for maximum energy savings.

Can solar panels work with electricity?

A household can marry solar power and traditional electricity for a more efficient, dynamic power system. Understanding how solar panels work with electricity can help you learn which solar power system could be right for you and how to use both types together for maximum energy savings.

What if I need more energy than my solar panels produce?

If you need more energy than your solar panels produce, you will source the electricity from the grid through the meter as you normally would. Your home is connected to both sources of electricity – solar panels and the traditional grid. Your primary source of energy will be photovoltaic.

What happens when my solar panels don't produce enough energy?

If your solar panels don't produce enough energy – say, if it's cloudy out – you will source the electricity from the grid through the meter as you normally would. Your home is connected to both sources of electricity – solar panels and the traditional grid. Your primary source of energy will be photovoltaic.

How can multi-energy hybrid power systems solve the problem of solar energy?

The developments of energy storage and multi-energy complementary technologies can solve this problem of solar energy to a certain degree. The multi-energy hybrid power systems using solar energy can be generally grouped in three categories, which are solar-fossil, solar-renewable and solar-

nuclear energy hybrid systems.

Do solar panels produce free electricity?

Solar panels produce free electricity whenever the sun shines. At Intermountain Wind & Solar, our photovoltaic experts design your solar energy system to meet your household energy needs and consumption. Even if your power consumption is high, your solar panel array can be sized to produce whatever amount of electricity you require.
