

# Xiya Base Station Computer Room Hybrid Energy Residential Building

### **Overview**

What is a reliability-based energy management model for residential buildings?

A reliability-based energy management model is proposed for residential buildings. Study the contingency analysis of the hybrid system of the residential buildings considering demand response program. Conducting the analysis of PV power output utilization to the sale of power to the main grid, battery charging, and demand supply.

How are renewable supply and hybrid storage shared in a community microgrid?

The renewable supply and hybrid storage are shared in the community microgrid with three building groups in different operational functions and different load distributions. Scenario 2: Zero-energy campus buildings integrated with the stationary battery and one group of HVs.

What is the search space of stationary battery capacity?

The searching space of the stationary battery capacity in the zero-energy community scenario is 5000–75000 with the maximum capacity comparable to the storage capacity of HVs. And the search ranges of the other three scenarios are determined according to their HV number. Table 1.
