

Yaounde portable energy storage lithium battery foreign trade

Overview

Why is the lithium-ion battery market growing so fast?

The global lithium-ion battery market is growing faster than ever, led largely by a rise in demand for EVs, portable electronics, and grid energy storage. This rapid market growth has led to a spike in international production and distribution, which naturally has drawn the attention of local governments and governing international organizations.

Should lithium batteries be reliant on one supplier?

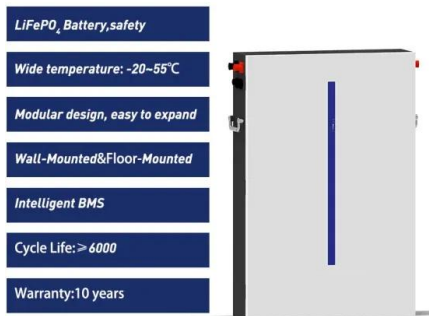

As policy is changing all of the time, it's good for companies to not be reliant on one supplier for all of their lithium battery supply needs. Trade wars also open the door for emerging territories to enter competition, such as India and Southeast Asia. Policies can also specifically target tech, a highly priced and heavily used consumer good.

Should you buy lithium batteries today?

Lithium batteries have become an increasingly important global product, and global policy has reflected as such, as nations will always leverage each other however they can. Tomorrow's policy is never certain, so make the purchases you want today in case policy changes for the worse.
